

Working Group 2 – Chair: Joze Skofljanec

Digital Preservation – System Requirements for Archives

Group looked at the last stages of the lifecycle of the document and in particular a digital preservation model and the process model. The reasoning behind would then allow the group to;

- ? Specify Functional Requirements
- ? Certification for Software Development
- ? Specific Metadata Development.

This would all assist digital archiving in new countries.

The group also looked at what was included in MoReq II from a digital preservation point and concluded that MoReq II would;

- ? Support subsequent interest in Digital Preservation – this should be prepared by January 2007, and that work should be done on this at the next DLM Forum Members Meeting in Helsinki in November.
- ? Create a separate procedure for Digital Preservation from MoReq II, using this as a base and perhaps adding links into the document.

What Next?

The group decided a survey amongst the DLM Forum Members for ideas and stories of what has already been done on modelling for Digital Preservation.

The group ask that members use the DLM Forum Website for these best practices and supply materials.

Idea was that colleagues present papers at the DLM Forum in Helsinki
